Title of the document

All paragraphs have a spacing on bottom by default, making it easier for the readers to distinguish between huge blocks of text. Also, the default line-spacing is set to 150%. The text is rendered as dark anthracite instead of black.

An alternative body text is also available using the regular font-weight. This can be used for documents where the light variant is undesired.

Side margins were shrunk which makes the documents easier to accommodate multi column views.

Example paragraphs

This example paragraph text has a footnote associated[1], please note the distance between footnotes and the footer text.

The weight between headers and content is well distributed.

Fixed width text for coders

This style also features a fixed-width style paragraph for code examples. The fixed width font used is Menlo, a nice monospaced font with bold and italic variants.

```
#include <iostream>
int main(int argc, char** argv)
{
    std::cout << "Hello world" << std::endl;
    return 0;
}
```

As you can see, the code example is clear and readable.

---

[1] This is a footnote

Tables designed for 2013

Tables have been redesigned as well. By default only line separators are visible after the header and before totals, also headers use bold condensed font instead of a background. Headers are aligned to the left rather than centered. They are made to be centered, however this can not be set as default in Pages.

Column Header 1	Column Header 2	Column Header 3
Table cell text	Some other text	
	This cell is not empty	
	Nor is this one	
Total value		

Table 1: The caption style was redesigned as well, of course

Bullet lists are clear

A bullet list is nicely spaced and indented:

- Bullet item number 1
- Second bullet item
- This bullet is on the third place
  - Indented bullets have the same spacing
    - As you can see
      - Up to fourth level

Character styles

Available character styles:

- **Bold text**
- ~~Strikethrough~~
- <u>Underline</u>

- *Italics*

- By default, the style also offers three text colors, carefully selected with accessibility in mind

  - Moss color text

  - Strawberry color

  - Grape color

Headers - level 1

Lighter than text font and different font variant.

Level 2

Smaller text.

Level 3

Smaller text.

Level 4

Lighter font color.

Level 5

Smaller text and even lighter font color.

Headers are defined up to level 5, after that you are on your own.
